SHORT WAVE RECEIVERS

The Hallicrafters Company has designed and produced more than 100 different major receivers for every communication use — receivers that are being used and acclaimed by more than a million field experts. Illustrated are two of the most

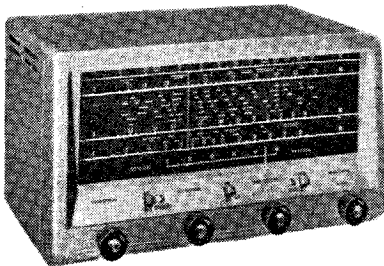

popular Hallicrafters receivers for short wave enthusiasts. Raytheon International offers prompt delivery from warehouse stocks of any of Hallicrafters soundly engineered and precision built receivers.

MODEL SX-62A

The most versatile receiver available for listening to local broadcast, FM, or world-wide short wave stations. This unit, in a single package, makes available to the listener the largest number of commercial and broadcast stations of any receiver on the market today. In addition, a 10-watt push-pull audio circuit, flat from 50 to 15,000 cycles, permits the reception of musical programs comparable with present-day high fidelity amplifiers. FEATURES: Broadcast 550-1620 kc, three S/W bands 1.62-32 Mc, FM or AM 27-109 Mc. Wide vision dial, one band lights at a time, temperature compensated, voltage regulated, six-position

selectivity, phone jack. Fourteen tubes plus one rectifier and one voltage regulator 105/125V. 50/60 cycle AC. Step-down transformers for 220 volt operation available. Satin black steel cabinet, gray and silver trim.

MODEL S-38E

Broadcast 540-1650 kc, three S/W bands 1650 kc-32 Mc. Large easy-to-read overseas dial, electrical bandspread. Phone tip jacks. 105/125V. 50/60 cycle AC/DC. Line cord (87D1566) for 220V AC/DC operation. Gray steel cabinet with silver trim. Also available in Mahogany or Blonde, gold trim.

THE W.R.H. IS A FIRST-CLASS EXPORT ADVERTISING MEDIUM

● for manufacturers of receiving, television, recording and transmitting equipments, measuring instruments, components and spare parts—because the WRH is distributed to broadcasting and television stations, manufacturers, radio-listeners, amateurs and professionals—all over the world.

RATES: Full page in black: Da. kr. 1325. £ 68. \$ 195. DM. 825. Half page in black: Da. kr. 750. £ 40. \$ 110. DM. 450. Quarter page in black: Da. kr. 400. £ 20. £ 65. DM. 250. Back cover in three colours: Da. kr. 2000. £ 100. \$ 300. DM. 1250. Second cover-page: Da. kr. 1400. £ 72. \$ 210. DM. 875. Special position page: 10% extra. Extra per colour per page: Da. kr. 700. £ 35. \$ 100. DM. 425.

● for broadcasting and television stations—because the WRH is able to increase the number of listeners to their respective programmes, and to interest firms in using their respective transmissions as propaganda for their products.

PARTICULARS: Blocks and matrices accepted. Blocks and stereotypography to be made in our engraving dept. will be charged to the advertisers. Closing date for copy and blocks 10. oktober.

OUR MANUFACTURING RANGE INCLUDES

Transmitting tubes up to the highest power ratings for medium, high and very-high frequencies and for television

Radio-frequency generator tubes for medical purposes and industrial applications

Special tubes for long-range communication and installations for commerce and industry

Amplifier tubes for long-range communication

High-tension rectifiers and thyratrons for power supply systems and electronic control

Receiving tubes for broadcast and television sets

Selenium rectifiers

Crystal diodes

Transistors

Temperature-dependent resistors (Thernewids)

Geiger-Müller counters

See last minute corrections informations last page.

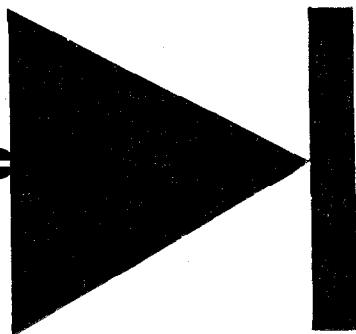

For your attention: If you like the WRH and its purpose write to World Radio Handbook, Lindorffsallé 1, Hellerup, Denmark, for brochures to send interested friends and connections. Your valuable assistance to make the WRH known as much as possible will be very much appreciated and will support the promotion of the understanding between the peoples of the World.

The Editor of the World Radio Handbook seeks information from all stations engaged in broadcasting and interested in international broadcasting and publishes the information as communicated to him by the stations. The Editor cannot be held responsible for the correctness of this information or for not publishing schedules and other particulars of stations which do not supply the information or for changes in the times and wavelengths of programmes made after the current edition has gone to press. We ask you to pay attention to the last minute information and corrections; (see last page).

PREFACE

The year 1959 promises to be one of great hope for the future of radio and television. It is the year of the Geneva Radio Conference which will surely become a milestone on the road to perfection in radio technical achievement. If, in the past, the number of radio and TV receivers has steadily grown, if—without being prophets—we can foresee an ever more rapid increase in the future in these fields, we must realize that for those concerned in radio and TV there is an equal increase in responsibility vis-a-vis the listener and the viewer.

The far-reaching media of radio, in particular, shows signs of a sickness which might be called "overcrowding of the wavebands and jamming." Poor reception on short, medium and long waves has, of course, led to rapid development of the frequency modulation network and, in this way, one of the problems, that of first quality transmission—particularly of music—has been solved.

Over and above this development, the far-reaching waves should not be forgotten. Widespread listener research in several countries has shown an increasing tuning-in to the local transmitter on a definitive and final basis. One no longer chooses a particular programme according to one's personal taste, because frequently only the local station or frequency modulation can be heard without interference.

Those who remember the early days of radio will recall the sensation created, for example, by the possibility of hearing foreign countries on short wave. This pioneering enthusiasm has given way to a steadily growing sense of resignation. The increasing number of radio transmitters and radio receivers must not blind us to the fact that the many deficiencies arising from one source or another—these sicknesses, in fact—are signs of a general decline in radio itself, its possibilities and its tasks.

Sound radio has already spread to the ends of the earth. Television is growing no less rapidly. To glance through the following pages is to receive ample testimony to these facts. Today, between many of the organisations so fully listed here, there are close ties established over many years. The discussion of common problems, the exchange of technical information, the mutual provision of facilities have become commonplace between them. We in British broadcasting have been fortunate enough to work alongside many of the services in this handbook. In that sense it might almost be a catalogue of old friends. The book has often been of value to us in the past, but perhaps it has never had more value than today when it underlines the world-wide importance of broadcasting and the responsibilities of those whose task it is to use broadcasting for the common good.

Sir Ian Jacob, KBE, CB.
President of the European Broadcasting Union
Director General,
The British Broadcasting Corporation

For radio, above all, with its far-reaching waves, could and should serve mutual understanding. During the last world-war, many listeners tried to form their own picture of the world situation by listening to broadcasts from friend and enemy. In Germany, thousands of people

did this, although "listening to the enemy" carried the death penalty. In times of peace, the desire to form one's own picture of the cultures and social conditions of other peoples and continents should be encouraged and not hindered.

Better understanding and better comprehension can only exist where there is mutual knowledge. Short-wave listening today can only frustrate and shock for no information can be gleaned amongst the confusion of jamming and propaganda. The ensuring of a free flow of objective and accurate information and the broadcasting of mate-

rial of true cultural value—that is the mission of radio today, if we are to obtain a world ripe for peace.

And it is for this reason that for radio 1959 is the year of hope, in which a fairer and more orderly distribution of wavelengths and a cessation of jamming could bring about great progress in the field of broadcasting. In the World Radio Handbook radio transmitters from all parts of the world are ranged alphabetically side by side, peacefully indeed—but on the air and in actual practice this is far from being the case. This is not, of course, the fault of the World Radio Handbook. On the contrary. This book appeals to the radios of the world to work together in peace so that technical gifts in the hands of man may be brought, unspoilt and free from all traces of hatred and the noise of war, to the people of every land.

Walter Steigner
Director,
UNESCO Radio Division

My sincerest thanks are due to the radio and television organizations, which, realising the purpose of the book, have kindly made available particulars of their organizations and supported my work in many valuable ways—to the many clubs and individuals that have assisted in making the contents of WRH complete—the many advertisers who, to mutual benefit, use WRH as a world advertising medium—and the many sympathizers with the purpose of WRH. I trust that this manifold and world-wide cooperation may be continued and augmented in the new year for the pleasure and benefit of all those interested in a peaceful development and exploitation of radio and television. It is my belief that the purpose of WRH can only be fulfilled by permitting it to stand open to all, irrespective of political, religious or racial views.

O. Lund-Johansen.

United Nations: The world forum of the General Assembly

WHEN THINGS GET "HOT" . . .

. . . They seem to gravitate naturally towards the United Nations. That is perhaps not surprising, since the world organization was created to keep international disputes and tensions from reaching the boiling point. The crisis may be *located* in the Suez area, in Hungary, in Lebanon or Jordan, but it is almost invariably *reflected* in the meeting room of one of the principal organs of the United Nations. And this is where radio takes a hand.

From the world forum of the General Assembly (see photograph) or the Security Council, the invisible lines of telecommunication radiate to far-distant continents, where men and women in individual homes and offices listen and hear their contemporary political history unfold.

During the 1958 Middle East crisis, United Nations Radio was able to broadcast meetings of the General Assembly and the Security Council to all six continents. In many countries, national and regional radio organizations picked up the signals and relayed them to their own local listeners.

In countries as widely separate as Ghana and Guatemala, Iraq and Indonesia, Canada and Czechoslovakia, listeners received up-to-the-minute – literally so – actuality on the major international preoccupation of the hour. – They received it *from source*.

In an age of spectacular scientific advance, this use of the well-established techniques of international broadcasting is not to be lightly discussed.

Many national broadcasting services co-operate in bringing about this chain of communication between event and listener.

The task of co-ordinating their schedules and facilities falls to United Nations Radio – and it is a task we consider an honor to perform.

PETER AYLEN
Director, Radio and Visual
Services Division, United Nation

A statement:

The responsibility of the international radio broadcaster to his audience has increased enormously with the quickening of communications and interdependence of peoples of the world today. In addition to presenting news and entertainment, he must contribute a worthwhile service toward the increased understanding of the aspirations and goals of his own people and his government. In order to render this service, he must understand the goals and aspirations of his audience. When this mutual understanding is established, the broadcaster has made a vital contribution to international understanding and the eternal goal of all peoples – everlasting peace.

Henry Loomis, Director: Voice of America – US Information Agency

LONG AND MEDIUM WAVE RECEPTION

During the daytime reception on the long and medium wave broadcast bands is obtained almost entirely by means of a wave which travels over the surface of the earth. The wave travelling upwards is completely absorbed in the ionosphere. The radio energy emitted from the aerial of the transmitting station travels outwards (usually in all horizontal directions) as a "ground" wave, which on these wavelengths consists almost solely of the "surface" wave, i.e. that which proceeds with its foot in contact with the earth. The distance range of such a wave depends upon the loss of energy which it encounters as it travels along, and this occurs principally within the earth itself. The foot of the wave penetrates some 50 feet or so into the earth, where it sets up currents which absorb energy from the wave, the magnitude of the loss depending upon the conductivity and dielectric constant of the ground, and upon the wavelength (or frequency). The ground constants vary very much with the nature of the terrain, but it will be sufficient here to note that the losses are least when the wave travels over sea water and greatest when it travels over earth of a desert-like nature. In the Table are given the approximate maximum ranges at which good reception can be expected at a country site where there is little man-made noise, for different transmitter powers. For daytime reception these ranges are given separately for transmission over sea water and over land of a "good" type, i.e. where the earth constants are those midway between the worst and best values commonly encountered. It will be seen that the distance ranges are always greater over sea than over land. Of course reception of a kind may be obtained at greater ranges than those shown: on the other hand reception in noisy town areas is likely to be less than good at the extreme ranges shown.

Besides depending upon the ground constants the currents set up in the earth vary considerably according to wavelength, with the result that the losses are greater the shorter the wavelength (the higher the frequency). Thus, for a given transmitter power the distance range is considerably greater on the long broadcast wavelengths than on the medium waves, and in order to take account of this the ranges given in the Table are for one wavelength in the long-wave band and for two in the medium-wave band. Distance ranges for other wavelengths may be estimated from these values.

It should be mentioned, whilst dealing with the ground wave, that it is enabled to bend around the curvature of the earth's surface by the process known as "diffraction" and though this process permits of reception of the ground wave at a greater distance than if it were absent, yet at a distance beyond the "bulge" in the earth's surface the wave is not so strong as it would be if the earth were flat. In this region its energy decreases more rapidly with distance than before, and furthermore, the effect varies with wavelength, so that on the medium waves it happens at shorter distances than on the long waves.

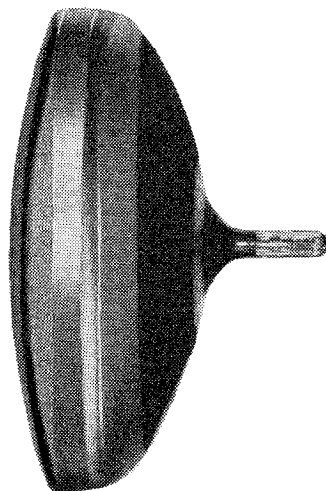

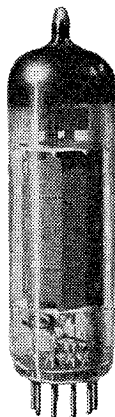

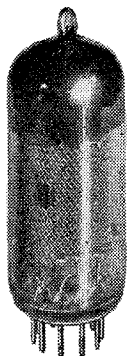

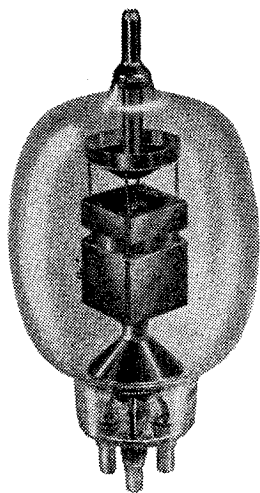

So much for daytime conditions. At night, as everyone knows, the distance range of long and medium wave stations is much enhanced. This is because the energy, which is radiated from the transmitting aerial in upward directions, and which during the daytime is all lost by absorption in the D layer of the ionosphere, is returned to the earth at night. After the sun's rays are removed from the atmosphere after dark the D layer disappears, the absorption of the upgoing radio energy largely ceases, and the waves are returned to the earth after reflection from an ionospheric layer higher up. The effect is not entirely advantageous, however, for it will easily be seen that this downcoming "sky-wave" will interfere with the ground wave and cause serious fading of the signals. Such fading will occur in a region where the strength of the ground wave is less than about three times that of the sky-wave. But, since the losses to which the sky-wave is subject are much less than for the ground wave, its strength decreases with distance much slower than does that of the ground wave. Thus, at short distances from the transmitter the groundwave will be by far the stronger and reception will be satisfactory: then there will be an area where the sky-wave is getting stronger in relation to the ground wave and fading will occur; finally, at a greater distance the sky-wave will be so much stronger than the ground wave that it alone will provide good reception. As can be seen from the Table the distance range for satisfactory reception by the sky-wave at night in most cases far exceeds that for the ground wave by day, due to the smaller losses for the sky-

wave, though it should be added that this reception will be inferior to good ground wave reception, owing to the variability of the ionospheric path. It should also be mentioned, with regard to the fading area, that this is usually considerably reduced in extent by the use, at most broadcasting stations, of aerials which deliberately reduce the amount of upward-going energy and attempt to confine their emission, as far as possible, to directions over the ground.

APPROXIMATE MAXIMUM DISTANCES FOR GOOD RECEPTION ON LONG AND MEDIUM WAVES

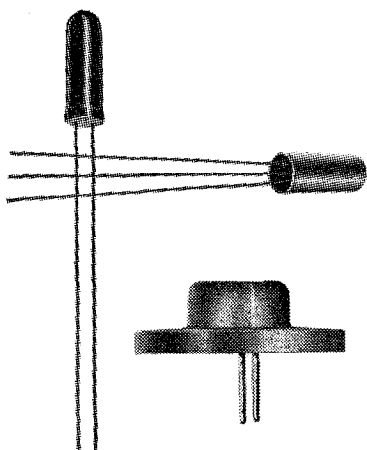

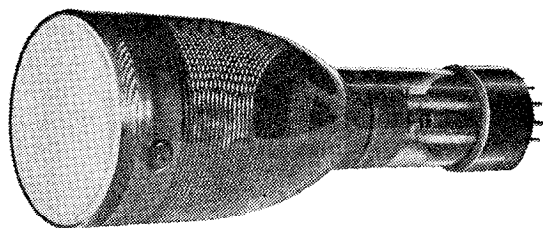

Power	LONG WAVES			MEDIUM WAVES					
	200 kc/s (1500 m)			600 kc/s (500 m)			1500 kc/s (200 m)		
	Day		Night	Day		Night	Day		Night
	Sea km	Land km	km	Sea km	Land km	km	Sea km	Land km	km
1 kW	220	150	*	210	105	*	190	42	*
10 kW	420	360	400	380	180	450	320	70	400
50 kW	580	510	900	520	240	930	420	94	850
100 kW	670	600	1100	590	270	1150	480	110	1050
500 kW	880	760	1500	720	350	1550	580	140	1400

* For Powers below 10 kW the sky-wave field is below the required level.

PHILIPS

*electron tubes
and semi-conductors*

Philips manufacture a complete range of electron tubes, from the smallest battery-fed subminiatures to giant transmitting tubes for broadcasting and industry; from electrometer tubes handling extremely small currents to heavy duty ignitrons, from tiny phototubes to 300 kV X-ray tubes.

In the fast growing domain of solid state electronics Philips are contributing on an ever increasing scale to the progress and development of semi-conductors. A complete range of diodes and transistors for the whole field of applications is available.

T. W. Bennington is an Engineer of the British Broadcasting Corporation. He has been engaged in short-wave radio since 1932, when he was in charge of the radiotelephone equipment and service in RMS "Majestic". Joining the BBC in 1934 he was at first a transmitter engineer, and then for 15 years in the Department concerned with short-wave planning. Now with the Corporation's Research Department he is concerned with long-distance short-wave propagation, and with the application of ionospheric data to long-distance transmission. He is the author of numerous articles on this subject, and of the book "Short Wave Radio and the Ionosphere", published by Iliffe and Sons, Ltd., of London.

SHORTWAVE RADIO CONDITIONS DURING 1959

T. W. Bennington, Research Dept., BBC, England.

Most users of *World Radio Handbook* will no doubt know that shortwave reception is obtained by means of a radio wave that travels from transmitter to receiver by successive reflections at the ionosphere and at the ground, and that, because the ionosphere is produced by the sun, it is subject to variations occasioned by the varying action of the sun upon it. Thus it varies with time of day and with the seasons, and the conditions for shortwave transmission change in a like manner. The effect of this is that the wavelengths which give best reception are constantly changing, and it is necessary to suit the wavelength to the ionospheric conditions prevailing over any geographical transmission path at any time of day or season.

Superimposed upon the diurnal and seasonal variations is a variation which is due to the sunspot cycle, and which takes about eleven years to go through all its changes. So conditions are not the same at a given time of day and month, in different years. In making an estimate of what conditions will be like during 1959 all these variations must be taken into account, and it is the sunspot cycle variation which is the most difficult to predict. In fact it is not possible to forecast the sunspot activity for very far ahead with good accuracy. We can, however, make an estimate of what conditions may be like during 1959, based on the known behaviour of past sunspot cycles.

The present sunspot cycle is now at a period of maximum activity, and this maximum is, in fact, the highest ever recorded in the continuous records which start in 1749. It does seem, however, though we cannot be quite certain at the time of writing, that the epoch of maximum activity is already past, and that the average sunspot activity has started to decline. It will probably continue to do this for about eight years before sunspot minimum is reached, so that the decrease in the average activity is likely to be slow. The result is that throughout 1959 one would expect the activity to be exceptionally high but slowly declining.

If this be so the smoothed sunspot number (which is the most reliable criterion of the activity) is likely to remain well above 100 throughout 1959, and, in these circumstances, the conditions for shortwave transmission will be such that the highest frequencies (shortest wavebands) will remain usable, having regard to the time of day, season of year and geographical positions of transmitter and receiver. In fact, we should expect the best wavebands to remain very much as they have been of late, with a possible small shift towards longer wavelengths at the end of the year.

It is not possible, in this short article, to indicate the best usable frequencies for 1959 for different times of day and seasons for a large number of circuits, but a few general remarks can be given, reference being made to the Table. In this are given, for three directions from Europe or vice versa, the *shortest broadcast wavebands* for good reception during different months and times of day. The shortest waveband usable over a given distance usually gives the best reception, though good reception is possible on the next longer wavebands, but it deteriorates if the waveband is *too* long. For short *distances* in the same directions somewhat longer wavebands are the *best*, but, generally speaking, provided the distance is greater than 4000 kilometres, the wavebands shown in the Table should be usable.

During the centre part of the day for the circuits shown the 11 metre band should be usable throughout the year, except over the North American circuit, where the 13 metre band should be best during all but the winter months. The 13 metre and 16 metre bands will be good alternatives. During the other hours of day longer wavebands will be most suitable, as shown in the Table, and here again, for the North American circuit, longer wavelengths than for the other two circuits are most suitable. In every case the next longer waveband to that shown should provide the best alternative. During the times not shown the best waveband should be one of those between those given for the nearest times, except during the early morning, when it is likely to be the next *longer* waveband to those given for the night period. It is possible, of course, that unforeseen variations in sunspot activity may cause some variations in the wavebands shown.

ROCKE

INTERNATIONAL

**OFFERS ITS OVERSEAS CUSTOMERS COMPLETE
COMMUNICATIONS OR BROADCASTING SYSTEMS
— REGARDLESS OF SIZE OR APPLICATION.**

ROCKE INTERNATIONAL acts as either the international division or the export representative of more than twenty-five American firms who manufacture equipment ranging from microphones and klystrons to complete broadcasting stations.

In addition to offering this equipment, Rocke International has broadened its services to include specifications of all related equipment, design of special equipment and complete systems, local surveys, supervision of installations and even the design and supply of buildings to house a broadcasting station or communications operation.

Rocke International Systems include:

- **COMMUNICATION**
- **BROADCAST**
- **TELEVISION-BROADCAST**
- **TELEVISION-INDUSTRIAL**
- **AUDIO EQUIPMENT**
(tape recorders, microphones,
loudspeakers, etc.)

With full assortment of products in these fields, Rocke International can meet your complete requirements. Purchasing from one source keeps your procurement costs at a minimum, speeds delivery and establishes a single commercial and technical responsibility.

Branches and Affiliates are located in: Paris, London, Brussels, Turin, Zurich, Manila, Beirut, Mexico City, Havana, Caracas, Buenos Aires, Sao Paulo, San Jose (Costa Rica), Stockholm, Frankfurt/Main, and Washington, D. C.

For further information, catalogs and prices write to:

KURER TRANSI

A full transistor set with
4 wavebands
16-2000 meters.
Battery operated.
7 transistors and
2 germanium diodes.

COMBI

A modern miracle.
A rechargeable battery-mains
portable set with transistor-
ized sound section.
4 wavebands
16,5-2000 meters

RADIO NETTE

Norway's Leading Radio Makers.

RADIO NORWAY

— The Norwegian Broadcasting Corporation — operates a network of about 50 transmitters for spreading the daily programme all over the country. The network comprises transmitters from 200.000 watts down to 25 watts on long waves, medium waves and FM. This is necessary because of the difficult geological conditions and the long distance — 1.000 miles — from the northernmost to the Southern part of the country. In order to maintain daily contact with the ships of the Norwegian merchant marine and the many other Norwegians all over the Globe, Radio Norway also operates a number of short wave transmitters, which are

beamed in seven different directions during the day. Every Sunday a special 25 minute programme in English, **NORWAY THIS WEEK**, is sent in all directions, containing glimpses from the country's social, economical and cultural life. Mailing address for reports and comments: **RADIO NORWAY, OSLO, NORWAY**. Return postage is not necessary.

Ev.: (Transmission times — please see NORWAY)

SHORTWAVE

Continued from page 10

Finally, as most listeners know, there will no doubt be some periods of ionospheric disturbance during the year. At these times, streams of particles are shot out from huge eruptions which occur on the sun, and, reaching the ionosphere a day or two later, give rise to a turbulence and to a general upheaval in its electronic structure, as well as to displays of the polar aurorae and to disturbances in the earth's magnetic field. Short-wave reception is then temporarily impaired, and, though it cannot be restored to normal by any action on the part of the listener, he may, at such times, be able to obtain the best reception possible on a somewhat longer waveband than that which he uses at normal times.

UNION EUROPEENNE DE RADIODIFFUSION (U.E.R.)

Seat and Administrative Office: 1, rue de Varembe, GENEVE.

Technical Centre: 4, rue de la Vallée, BRUXELLES.

Monitoring Centre: Jurbise (Belgium).

International Coordination Centre for TV/Programmes exchanges (Eurovision): Palais de Justice, Bruxelles.

Administrative Council (1957-1958): President: Sir. Ian Jacob, Director General, The British Broadcasting Corporation.

Vice-Presidents: MM. Léon Daumard, Inspector General "Radio-diffusion-Télévision Française".

Administrators: Representatives of the broadcasting organizations in: Austria, Denmark, Finland, France, Germany (Fed. Rep.), Italy, Netherlands, Switzerland and United Kingdom.

Director of the Administrative Office and Secretary General: M. Ch. Gilliéron.

Director of the Technical Centre: M. Georges Hansen.

Active Members: The broadcasting organizations of: Austria, Belgium, Denmark, Egypt (1958), Finland, France, Germany (Bundesrepublik), Greece, Iceland, Israel, Ireland, Italy, Lebanon, Luxembourg, Monaco, Morocco, Tunisia, Norway, Netherlands, Portugal, Spain, Sweden, Switzerland, Syria (1958), Turkey, United Kingdom (British Broadcasting Corporation), Vatican City, Yugoslavia.

Associate Members: The broadcasting organizations of: Australia (ABC), Belgian Congo, Burma, Canada (CBC), Ceylon, Haiti, Japan, New Zealand, Pakistan, Portugal (RTP-Radiotelevisao Portuguesa), Union of South Africa, United Kingdom (I.T.A. and Independent Television Companies Association Ltd.), United States (US Information Agency, N.A.E.B., C.B.S. and N.B.C.).

Publications: E.B.U. Review - every two months in English and French, published in two separate parts: A (Technical) and B (General and Legal). - Long and Medium waves reports (European Area). - Short waves reports.

INTERNATIONAL BROADCASTING ORGANISATION OIR
ADDR.: 15, Liebknechtova, Prague 16, Czechoslovakia. - Cable: Interadif, Praha.

Nature: International organization dealing with practical and certain theoretical questions connected with broadcasting and television programmes and technique and co-operation between broadcasting and television organizations.

Governing Body: General Assembly consisting of one representative for each full member.

ADMINISTRATIVE COUNCIL: Consisting of 7 to 13 members. Chairman for 1958: Representative of Bulgaria.

Vice-Chairmen for 1958: Representatives of Korean PDR and Hungary.

Members: Peoples Republic of Bulgaria, Peoples Republic of China, Czechoslovak Republic, Finland, German Democratic Republic, Soviet Socialist Republic of Lithuania, Peoples Republic of Mongolia, USSR.

MEMBERS: PR of Albania, Byelorussian SSR, PR of Bulgaria, Chinese PR, Czechoslovak Republic, Egyptian Broadcasting of the United Arab Republic, Estonian SSR, Finland, German Democratic Republic, Hungarian PR, Korean People's Democratic Republic, Latvian SSR, Lithuanian SSR, Moldavian SSR, PR of Mongolia, PR of Poland, Rumanian PR, Ukrainian PR, Union of Soviet Socialist Republics, PDR of Vietnam.

Facilities: Technical Centre: Prague, Czechoslovakia.

Publications: Documentation and Information Bulletin in Chinese, English, French and Russian issued every two months. Technical Documentation and Lists of broadcasting and television stations in operation. Bimonthly OIR Information and quarterly Catalogues: a) radio programmes, b) television programmes - suitable for exchange.

Meetings: General Assembly at least once a year. Administrative Council at least once a year.

Relations with other international organizations: Official relations with the ITU, UNESCO, the Economical and Social Council of the United Nations Organization and others.

ASOCIACION INTERAMERICANA DE RADIODIFUSION (AIR):

AIR is an association of the broadcasting corporations of the American countries. Founded in 1946 it represents more than 4000 broadcasting and 400 television stations. Its purpose is to preserve free and stable broadcasting, promote cooperation between broadcasting corporations and the public authorities, to raise the cultural level of the peoples, and to work for a closer feeling of association between the broadcasting corporations of America. AIR is recognized by the United Nations and collaborates with UNESCO, with the International Union of Telecommunications, with the organizations of the American States. AIR has subscribed to the "Panama Doctrine" in which the American Radio and Press declare themselves united against any attack on individual liberty and any restriction of the freedom of utterance. During its last General Meeting in March of 1958 held at Punta del Este, Uruguay, a declaration of democratic faith and of permanent action in defense of democracy and its principles was approved, and was proclaimed on October 4th of the same year on occasion of the celebration of Continental Radio Day and of the Twelfth Anniversary of IAAB's foundation. During the current year the institution has had intensive activity in defense of freedom of information in connection with events occurring in several countries. The Association of Argentine's Private Broadcasters, recently formed on occasion of the return of Argentine's radiobroadcasting to the

system of private enterprise, in which AIR had an outstanding influence, was recently incorporated to AIR. AIR's President is the Uruguayan Broadcaster Sr. Raúl Fontaina, and the Director General, Sr. Julio Menadier Carrasco of Chile. The address of the President is Mercedes # 973, Montevideo, Uruguay, and that of the Central Office, Casilla 10476, Santiago de Chile. Cables address: AIR. Santiago, Chile.

CATHOLIC BROADCASTING ORGANIZATIONS

ASSOCIATION CATHOLIQUE INTERNATIONALE POUR LA RADIODIFFUSION ET LA TELEVISION

General Secretariat: Avenue de la Gare 6, Fribourg-Switzerland.

General Secretary: Dr. J. Schneuwly.

Administrative Council consists of 12 members. President: Mag. Dr. J. B. Kors, OP, Hilversum/Holland. - Committees: a) TV-programmes. b) Radio-TV and the child. c) Publications.

Associate Members: Union of So. Africa, Algeria, Germany, Argentina, Austria, Belgium, Bolivia, Brazil, Canada, Costa Rica, Vatican State, Colombia, Cuba, Curaçao, Denmark, Egypt, Spain, Haiti, Indonesia, Iraq, Ireland, Italy, Morocco, Norway, Portugal, Puerto Rico, Peru, El Salvador, Luxembourg, Sweden, Switzerland, Trinidad, Venezuela, Australia, Ceylon, Belgian Congo, San Domingo, Monaco, Panama, Ecuador, Japan, Philippines, Paraguay, Tunisia, Uruguay, Chile.

Correspondent Members: French West Africa, Mexico, USA, Nicaragua, Panama (Canal Zone), Honduras.

Publications: Quarterly bulletin "UNDA", printed in French, stencilled in English and Spanish. - "UNDA-NOUVELLES", monthly, stencilled. The first "Catalogue of records of Religious Music", containing a list of more than 2000 records, was published in 1956. - Code des Educateurs à l'usage de la TV in French, German, Spanish, English, Portuguese: Commentaire du Code des Educateurs pour la TV.

General Assembly: Every two years: Last General Assembly: 1st, 2nd and 3rd of October in Geneva. - Congress: every 2-4 years; last congress in Vienna in 1955. Next Congress in Central America in 1960. Branch: For Latin America: Addr.: Palacio São Joaquim, 105 rua da Gloria, Rio de Janeiro.

YOUR BEST BUYS...

in Communications Receivers

HQ-160

13-tube dual-conversion superheterodyne circuit. Separate linear detector for optimum reception of SSB and CW. Adjustable notch filter. Automatic noise limiter. Voltage regulated and temperature compensated high-frequency oscillator for extra stability. Frequency range 540KCS to 31MCS in six bands.

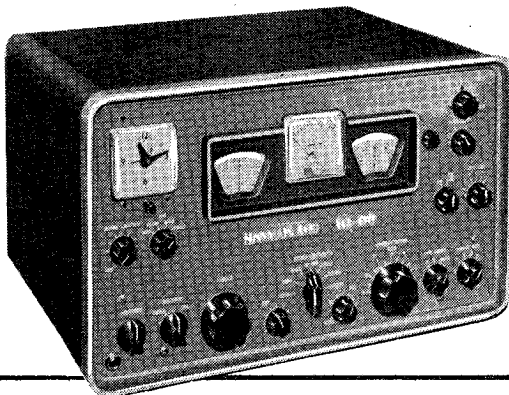

SUPER-pro 600

The last word in modern Communications Receivers . . . new in both electrical and mechanical concept. Combines the utmost in stability, sensitivity, precision tuning and mechanical reliability. A 20-tube dual conversion superheterodyne covering the range of 540 kc to 54 mc in six bands. Selected by the United States Government and almost every Government in Latin America.

HQ-170

The finest amateur receiver on the market. A 17-tube, triple conversion superheterodyne circuit with automatic noise limiter. Linear product detector for CW and SSB reception plus normal diode AM detection. Automatically adjusts audio response to fit receiving conditions. Full dial coverage of 6, 10, 11, 20, 40, 80 and 160 meter amateur bands.

Write today for full details and illustrated literature on these and other Hammarlund Communications Receivers.

Hammarlund Manufacturing Company, Inc.

RCA SHORT- WAVE and MEDIUM- WAVE

TRANSMITTERS

BTA-50G, the new RCA 50 KW AM "Ampliphase" transmitter, represents the most significant step since RCA introduced high-level modulation. It occupies half the floor space required by other 50 KW transmitters, cuts installation and operating costs, eliminates need for underfloor trenches, costly water cooling systems or external blowers. All components are easily accessible and can be quickly replaced.

Since its formation in 1919, Radio Corporation of America has been in the forefront of major advances in radio communications of every type. In virtually every corner of the globe RCA short-wave and medium-wave broadcast transmitters are providing day-in, day-out dependability under all extremes of climatic and operational conditions.

As the producer of the finest in transmitters, its experience in the radio industry is unparalleled.

At its research and engineering laboratories, RCA engineers conceive and develop the most advanced and improved circuits and mechanical components.

New RCA electron tubes and semi-conductors are being developed and produced to meet the changing needs of the entire industry, as well as specific RCA equipment.

For over a quarter of a century, RCA scientists have provided a constant flow of technical knowledge to the expanding radio and electronic industry...and products, facilities, and services to the world.

The RCA monogram is universally recognized as

a symbol of the radio age, that has brought new pleasures in entertainment, new techniques of communication, and new opportunities to millions of people throughout the world. It is a mark of quality and superior craftsmanship.

RCA broadcast transmitters have proven their economy and dependability in many years of long service for many types of broadcasters, such as the National Broadcasting Company network, the Finnish Broadcasting Company, Radio Pakistan, Radio Istanbul, and hundreds of private broadcasters.

RCA short-wave communications transmitters are preferred by many governmental and private communications organizations. Transmitters up to 1.2 megawatts of output have been built by RCA, and are used around the world to provide every type of radio communications.

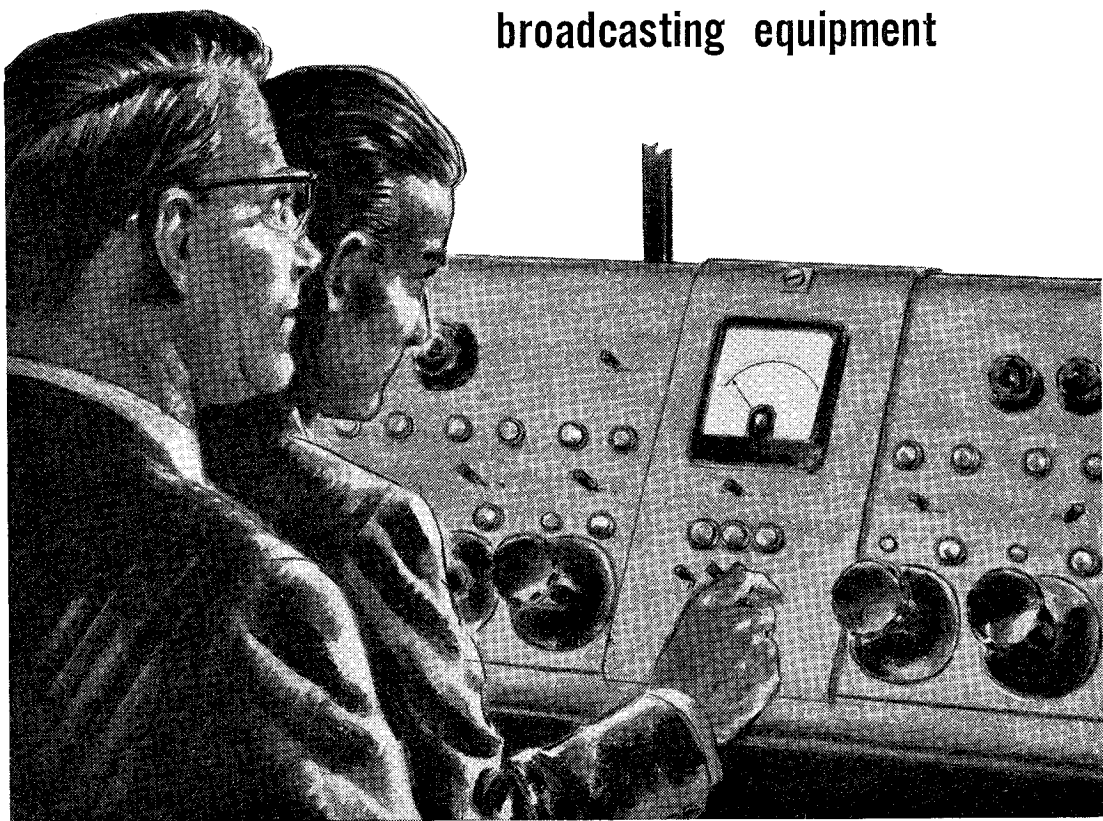

For the best investment in short and medium-wave transmitters see your RCA Distributor or write to Dept BE-50-L RCA International Division, Radio Corporation of America, 30 Rockefeller Plaza, New York 20, N. Y., U.S.A.

TABLE OF THE MOST SUITABLE METRE BANDS

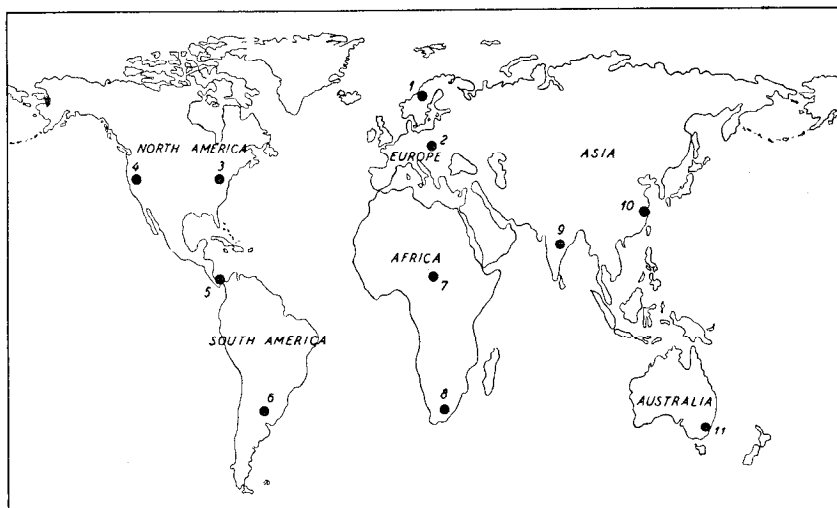

FOR BEST SHORT-WAVE RECEPTION IN EVERY PART OF THE WORLD AT VARIOUS TIMES OF THE DAY IN 1959.

Note: The figures in the table below are calculated for a specific point within each area as indicated on the chart below. The area numbers on the chart refer to the numbers indicated in the left-hand column of the table.

The figures in the table can be regarded only as average figures, as conditions will vary considerably from time to time due to irregularities in the ionosphere.

Example: A listener located in the eastern part of No. Am. (area 3) wishes to hear a station in the so. part of Af. (area 8) on a Jan. evening (21 local time). By following the horizontal column of figures starting at No. Am., East, on the left until it meets the vertical columns under the area no. 8 in the section for the months Nov., Dec., Jan. and Feb. on the right, he will come to the figure 25. This means that the 25 m. b. is the most suitable for listening to the required station at that time.

The listener's area	Local time	Area of the transmitting station																								
		May June July August										March April Sept. October										Nov. Dec. Jan. Feb.

**GATES**

BROADCASTING EQUIPMENT

5 KW. FM
TRANSMITTER

DUAL CHANNEL CONSOLE

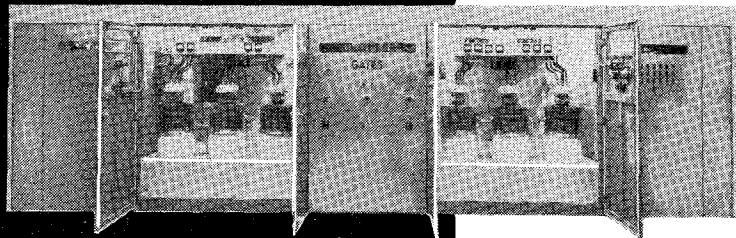

TV TRANSMITTER

GATES is the largest supplier of AM radio broadcasting equipment in the U.S.A. The prime reason for GATES' popularity everywhere, is that while maintaining the highest standards of Quality, GATES equipment is always competitively priced—and equally important, costs less to install and to operate. Why not write today for descriptive literature and engineering data on this modern GATES equipment.

A full line of AM & FM broadcasting, television and communication transmitters from 250 watts to 50 kw.

● Speech Input Equipment • Transmitter Control Consoles • Master Control Consoles • Speech Input Consoles • Plug-In Preamplifiers • General Purpose Consoles • Transcription Turntables • Mobile Sound Effects Console • Automatic Programming Equipment.

● Remote Amplifier Equipment • Directional Phasing Equipment • Monitoring Equipment • Oscillators • Remote Control Equipment.

HOW TO USE THE WORLD RADIO HANDBOOK

The practical information given in the following section in respect of the broadcasting services of each individual country includes:

Local Time and Languages used are indicated for each country and as far as possible the number of receivers in use.

The Addresses of the broadcasting companies in question. Where broadcasts are commercial this is stated.

Names and Titles of the leading personalities in each company.

List of Stations (A.M., F.M.) operated by each company with call signs of their transmitters, all frequencies and wavelengths (medium-, shortwave, ultrashortwave), as well as their power expressed in kilowatts (or watts) or megacycles.

Each short-wave station has its own identification call sign consisting of 3–5 letters or a combination of letters and figures of which the first, or two first, denote the nationality in accordance with the international list of station prefixes. (See page 21). Some short-wave stations, the American ones for example, use these call-signs when announcing themselves.

Long and medium wave stations are divided into three categories, viz. (1) **Main Stations**, which are so powerful that they can generally be heard throughout the whole area of the country in question, and from which most of the broadcasts emanate; (2) **Regional Stations**, which can be heard only within a certain area of the country, and whose broadcasts consist partly of re-transmissions of the programmes of the main stations and partly of their own programmes; (3) **Relay and Local Stations**, which mostly re-transmit main station programmes. These relay stations are the weakest, and are local stations which can be heard only within a limited area. The above-mentioned stations are all **AM stations**, i.e. amplitude-modulated stations. In addition, there is a fourth category of stations: (4) **FM stations**, i.e. frequency modulated stations, in order to give listeners a reception free of interference. These stations have only a very short radius, and are consequently local stations.

Most short wave stations use directional aerials, i.e. their broadcasts are directed toward particular areas, and these give the names to the various services: European Service, Near Eastern, Middle Eastern, Far Eastern, Pacific, Latin-American, Caribbean Service, etc. Language and frequency employed vary according to the area to which broadcasts are directed.

The best reception should be obtained from the transmissions which are specially directed to your area. However, there is a good deal of overlapping between adjacent service areas, so that it is often possible to obtain good reception outside the times shown. Short wave propagation conditions are continually changing because of the influences of daylight and darkness, seasonal considerations, and solar activity. In consequence, waveband changes have to be made from time to time if good reception is to be maintained.

Times are shown on the 24 hours system. In this system midnight is 00.00 hrs., 3 am: 03.00 hrs., 10 am: 10.00 hrs. and midday 12.00 hrs. Instead of starting again at 1 o'clock, as the 12-hour system does, the 24-hour system continues to increase the number of each hour until 23.59 (11.59 pm.) is reached. Thus 13 hrs. is 1 pm., 17.00 hrs. 5 pm. and so on. The great advantage of the system is that it eliminates any possible confusion between times a.m. and times p.m.

On page 18 you will find a Local Time Conversion Table which gives the local times (summer and winter) in most parts of the world in relation to Greenwich Mean Time (G.M.T.). For example, from September to May it is 15.00 hours New York time when it is 20.00 hours G.M.T., since the table indicates that local time in New York is 5 hours behind G.M.T. From May to September U.S.A. introduces daylight saving time and, consequently, it is 16.00 hours New York time when it is 20.00 hours G.M.T. If you are listening at sea you should consult the radio-officer for the varying differences between ships time and G.M.T.

Frequency and Wavelength. Frequency and Wavelength are divided into the following groups: **Long waves**, **medium waves**, **short waves** and **ultra short waves** (V.H.F. – very high frequencies – FM).

The wavelength of a station is measured in metres and kilocycles per second (kc/s); for FM-stations in megacycles per second (mc/s). A kilocycle is 1000 cycles; a megacycle 1,000,000 cycles.

As the velocity of propagation in space is, in round figures, 300,000,000 metres per second, any of the quantities—metres, kilocycles or megacycles—are readily converted into the other forms by means of the following formulae:

Metres to Kilocycles

$$\text{Metres} = 300,000/\text{Frequency (kc/s)}$$

Kilocycles to Metres

$$\text{kc/s} = 300,000/\text{Wavelength (metres)}$$

Metres to Megacycles

$$\text{Metres} = 300/\text{Frequency (Mc/s)}$$

Megacycles to Metres

$$\text{Mc/s} = 300/\text{Wavelength (metres)}$$

Daily Programmes: Under this heading you will find information concerning the total broadcasting

HOW TO USE THE WRH *continued from page 28.*

hours on the different frequencies employed during transmission hours, as well as a survey of the news, and other fixed programmes of interest: National music, mailbag, language lessons, weather reports, program preview, time signals etc.

Announcements: The language alone is not a conclusive indication of the origin of a broadcast to which you may be listening. Hearing a programme in French or Spanish, for instance, does not necessarily mean that it is transmitted by a French or Spanish station respectively. To make sure of identifying a station correctly it is, therefore, essential to wait for the announcement which every station broadcasts at regular intervals. These call signs are given in this book for practically all the stations listed.

Interval-Signals: For identifying stations it is also of importance to know the signals used during the intervals between programme items. Under each station you will, therefore, find an indication of the type of signal used, and in many cases a reproduction of the musical notes of this signal.

Shortwave broadcasting takes place mainly on the following metre bands (m.b.):

49 metre band - 41 metre band - 31 metre band - 25 metre band - 19 metre band - 16 metre band - 13 metre band and 11 metre band.

Many short-wave stations lie outside these bands. The 60 and 80 metre bands are used for local broadcasting, i.e. for reception over relatively short distances, which applies, for example, to many South and Central American stations and stations in Central Africa.

In the following pages you will find a large variety of call-signs and frequencies. In many cases these belong to the same transmitters which are connected to different aerials designed to radiate signals to the best advantage in respect of each service. The various call-signs usually serve to identify individual frequencies.

Many programmes are broadcast simultaneously from several transmitters on different frequencies, which enables you to select the one which is the most clearly audible in your area or on your particular receiver. If reception on one of the frequencies used is poor, you should examine reception conditions on the other frequencies employed by the same station. On page 24 you will find a table of the most suitable metre bands for best short-wave reception in every part of the world at various times of the day throughout the year 1959.

Verification by QSL-cards. As indicated in the survey of the broadcasting services of the various countries, many of the stations listed are interested in receiving reports from listeners in respect of their transmissions. These stations acknowledge reports by sending listeners a QSL-card (verification) or a letter. For most of these stations it is stated whether reports are answered by QSL-card or letter and if return postage is required. If nothing is mentioned, it is unnecessary to send reply postage. Many short-wave listeners make a hobby of collecting these QSL-cards which are often elaborately designed and colourful.

Reports from Listeners: Listeners' reports can in most cases be written in English, but Spanish is preferable when writing to South or Central American stations.

In the new edition of *How to Listen to the World* you will find all information about how to write your reports to the stations. -

If reply postage is required by a station, enclose with your reports an International Reply Coupon obtainable at most post offices. The full address of each station will be found in the individual surveys.

How to identify a short-wave station:

Whenever you come across a station which is unknown to you, proceed as follows for identification: Read the approximate frequency indicated on your dial in megacycles or kilocycles or the wavelength in metres. Find from the table of frequencies and wavelengths what stations are working in the neighbourhood of the reading shown by your dial. When you have reduced the source of the broadcast to one or two possibilities and at the same time noted details of the program heard and the language used, check these data against the program surveys printed in this Handbook. For confirmation it is advisable to wait for the station announcement or interval signal mentioned previously.

Reception reports are particularly useful to the engineers in selecting the most suitable wavelengths for your area. Use of the SINPO code or of the „555“ code for reports are very helpful. The codes are as follows:

SINPO-code					"555"-code		
S	I	N	P	O	S	I	O
5 excellent	5 nil	5 nil	5 nil	5 excellent	0 inaudible	1 very strong	0 nil
4 good	4 slight	4 slight	4 slight	4 good	1 very weak	1 strong	1 very poor
3 fair	3 moderate	3 moderate	3 moderate	3 fair	2 weak	2 fairly strong	2 poor
2 poor	2 severe	2 severe	2 severe	2 poor	3 fairly strong	3 weak	3 fair
1 barely aud.	1 extreme	1 extreme	1 extreme	1 unusable	4 strong	4 very weak	4 good
					5 very strong	5 none	5 very good

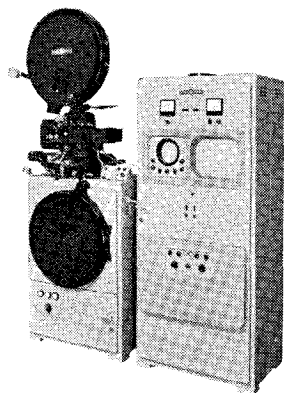

S = Signal strength. I = interference. N = noise.
P = propagation disturbance. O = Overall merit.

Example: 543 means a very strong signal with weak interference reducing the overall reception merit to good.

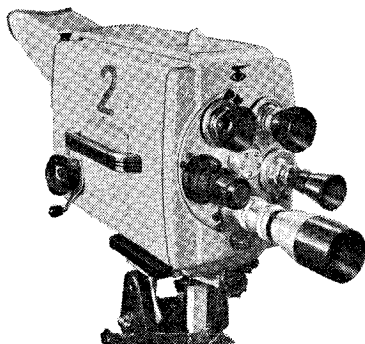

THE NEW EDITION OF »HOW TO LISTEN TO THE WORLD«

will help you to get the best from your receiver. It explains in simple language how to set about finding, identifying and logging foreign stations and getting good results throughout the year. Price: Da. Kr. 6.50, £ 1/6/6, \$ 1.00, or Dm. 4.00. Order your copy now through a bookseller or direct from World Radio Handbook, Lindorfs alle 1, Hellerup, Denmark.

Listen! Every sound recorded lifelike on TRADE MARK REGISTERED **SCOTCH** Brand Magnetic Tapes

The whisper of muted violins or the mighty crash of cymbals—you hear them both and all between with brilliant fidelity when they're recorded on "SCOTCH" Brand Magnetic Tape.

Now there are four famous "SCOTCH" Brand tapes to choose from: popular No. 111 Tape for low-cost recordings; High Output Tape No. 120 for fullest dynamic range sound; Extra Play Tape No. 190 for 50% extra recording time on a single reel, and new Extra Play Tape No. 150 offering as much recording time as 1½ reels of conventional tape, made with polyester backing for stability in any climate, any temperature.

For helpful, free booklet, "Properties of Scotch Magnetic Tapes" write Minnesota Mining and Manufacturing Co., International Division, 900 Bush Avenue, St. Paul 6, Minn., U.S.A.

"SCOTCH" Brand Magnetic Tapes, like the thousands of other products made by Minnesota Mining and Manufacturing Company, are designed to meet the highest standards of performance. A program of continuous research insures the highest quality as well as a constant flow of new products. Good reasons to *always* look to 3M—first.

"SCOTCH" is a registered trademark of Minnesota Mining and Manufacturing Co.

MORHAN

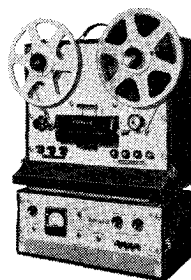

delivers
the world's finest recording
and playback equipment
throughout the world

Pentron Dynacord *stereo/monaural professional tape recorder*

The result of three years of research and development, the Dynacord at last reconciles fully professional performance with relatively moderate cost. Not only is it the only completely solenoid-operated professional tape recorder in its price class, but—when used in conjunction with a matching Pentron electronic assembly—it offers a degree of sonic fidelity, foolproof operating simplicity and overall reliability which is close to the ultimate at the present stage of the recording art.

15 and 7½ ips speeds • advanced-design head blocks available in stereo or monaural head configurations • completely electrical pushbutton operation

Manufactured by Pentron Special Products Division

Irish Ferro-Sheen *high-fidelity recording tapes*

The exclusive Irish Ferro-Sheen process of magnetic tape manufacture represents a radical departure from conventional "coated tape" techniques and is a completely original method of controlling the physical properties of the magnetic oxide layer and its lamination to the tape base. Irish Ferro-Sheen tapes are distinguished by almost total freedom from oxide shedding and by an unprecedentedly smooth oxide surface which results in reduced head wear, lower random noise, superior frequency characteristics, stabler tape motion, reduced drop-outs and unusually low print-through.

THERE'S AN IRISH TAPE FOR EVERY RECORDING REQUIREMENT

Irish Ferro-Sheen Green Band—on 1½-mil acetate film base
Irish Ferro-Sheen Shamrock—on 1½-mil pre-selected acetate film base
Irish Ferro-Sheen Long Play—available on either 1-mil acetate or 1-mil Mylar* polyester film base
Irish Ferro-Sheen Sound Plate—on 1½-mil Mylar* polyester film base
Irish Ferro-Sheen Double Play—on ½-mil Mylar* polyester film base
Irish Ferro-Sheen fortified Double Play—on ½-mil specially strengthened Mylar* polyester film base

* Du Pont's registered trademark

Manufactured by ORRadio Industries, Inc.

World's Largest Exclusive Magnetic Tape Manufacturer

Rek-O-Kut *turntables and pickup arms*

Model B-16H three-speed 16-inch transcription turntable

The last word in professional turntable design—with shock-mounted hysteresis synchronous motor, precision turntable assembly, and Lamitex motor pulley pressure-fitted and ground directly on motor shaft.

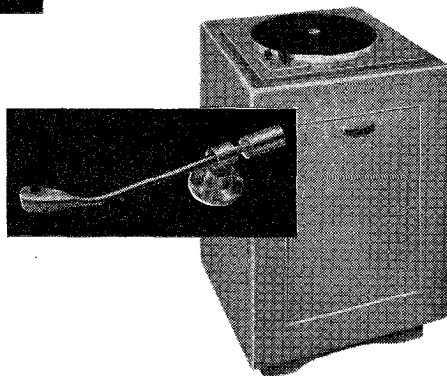

Stereo/Monaural turntable arms. Designed to accommodate the new 3 and 4-terminal stereo cartridges, as well as standard monaural cartridges • Closest approach to completely free cartridge suspension—utilizes special friction-free pivot bearings • Maximum horizontal and vertical compliance for optimum tracking and greatly reduced distortion and record wear • Acoustical damping for lowest resonance • Interchangeable plug-in cartridge shells; micrometer stylus pressure adjustment; variable height adjustment.

Model S-120: 12" stereo/monaural arm • **Model S-160:** 16" stereo/monaural arm • **Model PS-20:** extra stereo shell.

World-famous REK-O-KUT Rondine turntables. Seven models available, ranging from the custom-built, three-speed, hysteresis-motor Rondine Deluxe, Model B-12H, to the new Rondine Model K33 single-speed turntable kit.

Made by REK-O-KUT

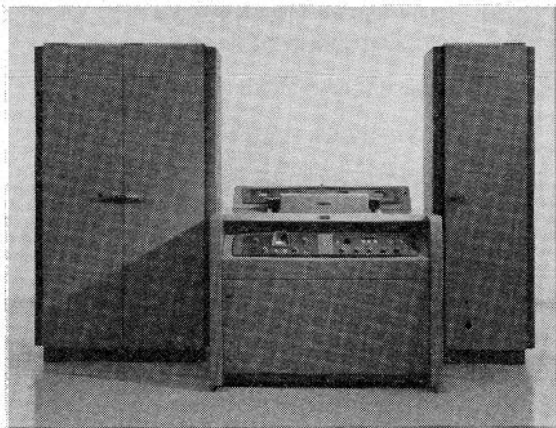

World's Finest Disc Recording and Playback Equipment

AMPEX

World Leader in Precision Magnetic Tape Recording Instruments

Ampex Tape Recorders are in service throughout the world in television and radio stations, and in professional sound recording studios... wherever finest quality is required.

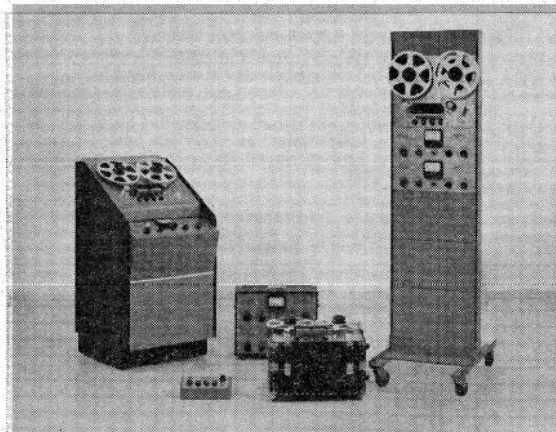

VR-1000 Videotape® Recorder

First commercially available Videotape Recorder. Magnetically records what the TV camera "sees," in either black and white or color. Playbacks look "live."

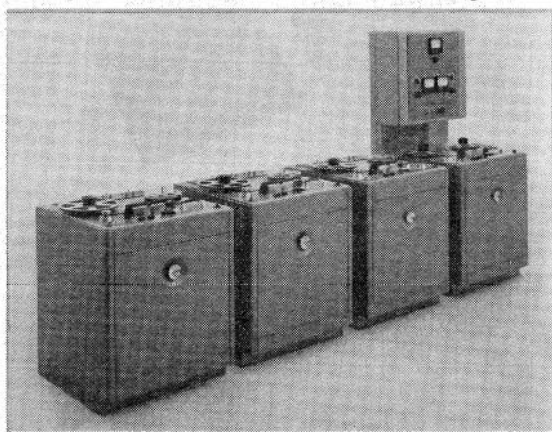

MODEL 300 Magnetic Tape Recorder

Standard of the professional recording industry, it consistently delivers the finest in audio reproduction. Available in as many as 8 channels, in console and rack mounting.

MODEL 351 Magnetic Tape Recorder

First choice of the broadcasting industry. Features printed circuits and miniature tubes. Available in console, rack and portable models, with one or two channels.

MODEL 3200 Magnetic Tape Duplicator

High speed duplication, with superb fidelity, of recorded master tapes. Makes up to 10 copies at one time. Available with one, two or four channel heads.

*TM Ampex Corporation

Fully illustrated brochures, complete with specifications, are available on each recorder and the duplicator. Technical bulletins are also available on the following subjects: VIDEOTAPE RECORDING • VIDEOTAPE SPLICING • MULTI-CHANNEL RECORDING • MULTI-CHANNEL TECHNIQUES. See your nearest distributor listed on next page or write to Ampex.

FREQUENCY BANDS ALLOCATED TO BROADCASTING, TELEVISION AND AMATEURS.

The table below is based upon the Atlantic City Radio Regulations. For bands between 3 and 27.5 mc/s the present situation differs a little from the table in some cases. Some bands are shared with other services. Region 1: Europe, U.S.S.R. in Asia, Africa. Region 2: N. and S. America, Northeast Pacific. Region 3: Asia exc. U.S.S.R., Australia, part of Pacific.

BC: Broadcasting (AM sound) - BC(trop): Broadcasting (AM sound, tropical zones) - BC(FM): Broadcasting (FM sound) - BC(TV): Broadcasting (Television) - AMAT: Amateurs.

U.S.A.: »R. Boston« (WRUL). »Swedish DXprgr.« in the Mo.prgr. 20.30-20.45.

AIR EXTERNAL SERVICES PUBLICATIONS

For overseas listeners to the short-wave transmissions of All India Radio, **INDIA CALLING**, a monthly programme journal in English, provides a service of advance programme information supplemented by some of the best broadcast talks on life in India today. It is published in three illustrated editions — Eastern, Western and European.

For listeners in West Asia there are **IDHAT-EL-HIND**, published in Arabic, and **SADA-E-HIND**, published in Persian. There are also programme bulletins for Burmese, Indonesian, Chinese and Tibetan speaking listeners.

The journals are supplied free of cost to listeners in foreign countries. Requests for them may be forwarded either through the Indian diplomatic missions or direct to

NB. The only transmitters mentioned are these with a power higher than 5 kW. As a matter of fact, the secondary of regional stations of lower power are often moved by the R.T.F. Administration (Radio diffusion - Television Française) and it is no use to locate them. The principal CFTH stations which belong to this category are the following:

— Caen — Lille-Camphin I — Perpignan — Saint-Brieuc
— Grenoble-Ville I — Nantes-Montbert I — Poitiers — Strasbourg-Sélestat III

EUROPEAN SERVICES:

STATIONS: Long and Medium Waves:

200 kc/s 1500 m - 1295 kc/s 232 m FM: Berlin 87.6 mc/s 647 - 464 - 1340 - 224 -

The two columns below show the wavebands, which the BBC expects to use during the months from April to September and October to March. There will, however, be changes of both wavelengths and wavebands - sometimes of short notice - and listeners are advised to listen to announcements which will cover all such changes. Detailed wavelengths information can be obtained from the prgr. journals.

Great Britain

etc.

GENERAL OVERSEAS SERVICE

The General Overseas Service, which operates 22 $\frac{1}{2}$ hours a day, 03.30–08.00, 09.15–03.00, and can be heard at suitable listening times all over the world, is addressed to English-speaking listeners, wherever they may be. All Prgrs. are in English. The times at which the General Overseas Service is available in various parts of the world and the appropriate wavebands are: (all times are subject to alterations):

Prgr. for Norwegians abroad: Sun.: Religious Sce., Sport. L.N. – Mo.: Sport N., Parliament N. – Tues.: Answers to letters from listeners. L.N. – Wed.: Request Prgr. (music). L.N. – Thurs.: World N., L.N. – Fri.: Missionary N., L.N. – Sat.: Letter Box, L.N.

For Norwegian Seamen in the No. Atlantic and No. Sea: Tromsø S.W. Tr. broadcasts daily the entire Home Sce. on 17755 kc/s. ANN.: "This is Radio Norway with its shortwave service for Norwegians abroad".

POLSKIE RADIO

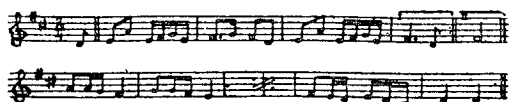

/ POLISH RADIO /

**broadcasts news, music, feature programmes
over 17 transmitters on long, medium and short waves**

Warszawa 10 Po Box 46

/For full information see Poland/

INT.-SIG.: Every s.w. transmission is introduced by the following theme, which originates from an ancient folk tune from Hallingdal:

Five minutes previous to every s.w. tr. the following signal is sent: 

Message to our English-speaking audience: In our daily prgrs. for Norwegians abroad we will usually have a section of Norwegian music or music presented by Norwegian artists. This musical section, which lasts 15 to 20 minutes, is introduced in English as well as in Norwegian. On Wed. and Sat. you can listen to our "Letter Box Programme", in which we play our listeners' request records. We often receive letters from listeners in Norway with request to play a record with a greeting to one of their relatives abroad, but we regret to be unable to comply with these requests. Every Sunday we have an additional prgr. in English, "Norway this week", in which we try to present Norway in different ways through music and feature prgrs. We are very grateful for comments on our transmissions. Reports are answered by QSL-card. Return postage is not necessary. Our postal address is: RADIO NORWAY, Oslo, Norway.

PUB.: Programbladet (weekly).

MOSCOW CALLING

What USSR broadcasts about

The Soviet Union covers a sixth of the globe. In order to travel through the country from west to east—from the Polish frontier to the Pacific coast—a passenger in an express train requires fourteen days. When the rising sun gilds the summit of Kljutjevskij in Kamtjatka, the inhabitants in the western areas are just going to bed. From the cold pole in Jakutsk, where the thermometer often registers 70 degrees below freezing point, to the hot desert of Karakum, where the temperature reaches 60 degrees (C), one meets the most various climatic conditions. The fauna and flora of the country are extraordinarily diverse. Its natural resources are unlimited.

The population of USSR exceeds 200 millions. There are Russians, Ukrainians, White Russians, Lithuanians, Gruzes and Moldavians—people of over sixty nationalities.

Moscow broadcasting station tells about life in this country, and transmits in 35 different languages.

The programmes comprise reports on sporting events, concerts, literary programmes. Listeners are informed about science and techniques, new books, theatre and film shows. Moscow broadcasting station also comments on the most important international events. There are special programmes for women, for children and for young people. In these programmes are given answers to letters from listeners and the records people have asked for; information is given concerning the life of Soviet Russian women, and about students and school children.

Foreign guests are broadcast over the Moscow station—political personalities from abroad, representatives of business circles, scientists, artists, people of different religions, workers, and peasants visiting the Soviet Union as tourists or as members of various delegations.

Moscow always replies to its listeners by radio and letter, sending them various souvenirs and prizes for participating in the competitions of the Moscow station.

News, Commentary, features prepared in French and broadcast by Sottens (Switzerland), RTF (Paris) and INR (Brussels) several times a week, non-scheduled.

SUMMER SUPPLEMENT to the WRH.

Organizations, experts, listeners, clubs and so forth, which use WRH in connexion with their work or hobby, have asked us to publish in June/July a supplement to WRH for the purpose of: correcting the contents of WRH, to publish summer schedules of the most important short wave stations all over the world, and to bring the medium and short wave tables up to date.

If we receive enough orders we have planned to publish a supplement of this kind in approx. June 1959. In order to be able to estimate the size of the circulation, we ask you to be so good as to inform us as early as possible, whether you desire to reserve one or more copies. The price, including postage, will be: Dan. Kr. 4.00, £ 0/4/8, \$ 0.70, DM 2.50, Sw. Kr. 3.00.

ANN.: E.: "This is the United Nations Radio in Geneva". - F.: "Ici les Nations Unies a Genève". - INT.-SIG.:

V. by QSL-card or letter. - PUB.: Prgr.sched. free on request.

BROADCASTS FROM INTERNATIONAL COMMITTEE OF THE RED CROSS, GENEVA

L.P.: Chief of Broadc.: Georges Kuhn. - In Peace Time: ICRC organizes occasional test transmissions on the frequency of 7210 kc/s 41.61 m. - In Times of Crisis: ICRC broadcasts on the same wave-length programmes containing information regarding missing persons; for this purpose it has the use of other suitable frequencies of the Swiss Broadcasting Services.

"PARADYS"

The SABC's
national shortwave
transmitting station

The transmitter hall at "PARADYS"

EUROPE up to the boundaries of the Soviet Union covers some two million square miles; and here where civilisation was born, grew and matured, 400 million people are served by a host of broadcasting stations in the hands of many public and private concerns. Far away at the foot of Africa in an area almost half as large as Europe itself, the South African Broadcasting Corporation must bring the benefits of western culture and the best in the world of entertainment to listeners scattered in this vast domain.

The challenge has been met in two ways. The cities and their environs are served by 12 medium-wave stations. At each centre three powerful transmitters radiate the three national programmes – the ENGLISH, AFRIKAANS and COMMERCIAL SERVICES. But there has always been the additional problem of bringing really

good reception to listeners on lonely farms, in villages nestling under the flat-topped koppies, and at distant outposts. And so the SABC has ploughed half-a-million pounds into 400 acres of farmland 12 miles to the south of Bloemfontein.

On this farm with the romantic name "PARADYS" ("Paradise" in Afrikaans) nine modern shortwave transmitters have been installed, and each may be connected to any of the 18 antennas for the national services.

But listeners outside the Union have not been forgotten, and seven special antennas have been built to carry the SABC's AFRICA SERVICE. Intended primarily for our friends on this continent, the service may be heard in many other parts of the world. It is indeed your portal to the culture, entertainment and information of a continent that throbs with the progress of a virile civilisation.

The frequencies and wavelengths given above are those AIR expects to use during the month of Sept. 1958 and onwards. There will, however, be changes in frequencies from time to time and listeners are advised to listen to announcements which will cover all such changes. Detailed information can be obtained from the Programme Journal. ANN.: Home Sec.: "This is All India Radio". External Sec.: "This is Delhi calling in the External Services of All India Radio". INT.-SIG.: All India Radio's signature is a melody of eight second's duration repeated with intervals of 10 seconds in between. The Instruments used are violin, viola, cello and tampara.

V. by QSL-card. - PUB.: "India Calling" free of charge. - Weekly prgr. journal in English and fortnightly prgr. journals in Hindi, Urdu, Tamil, Telegu, Gujarathi and Bengali. Requests for free supply of copies may be made either to the Director of External Services of All India Radio, New Delhi or through the Indian Diplomatic Mission concerned. For Home prgr. journals request may be made to the Director General, All India Radio, New Delhi.

1

4

1 JORK-TV, Japan:
Broadcasting of Kabuki-
Drama "Chushingura".

2 Circuito CMQ, Cuba:
CMQ transmitter-building
at Arroyo-Arenas
outside Habana.

**3 Radio Sarawak: Music-
Hall:** Two local Malays
record their clown act which
is very popular with Malay
listeners throughout Sarawak.

**4 Tanganyika Broadcasting
Corporation:** One of the
Highlights of the Swahili
Broadcasts is Comedy. The
picture shows three wellknown
personalities rehearse a
sketch for a monthly variety
show.

**5 New Zealand Broadcasting
Service:** A group of Maori
performers such as are heard
in the weekly Maori music
series, Thursdays and Sun-
days.

ANN.: Home Service: The call sign and the station name are announced at the commencement and end of each transmission. At intervals between programmes, an announcement, "NHK" is made - On the 1st network, the call-sign and the station name are announced just

before timecast - On the 2nd network, the call-sign and the station name are announced every hour at half past. - Foreign Service: English: "This is Radio Japan, the overseas broadcasting service of NHK. We are broadcasting to..." ("Target area") - French: "Ici Radio Japon..." (target area) - German: "Hier ist Tokyo, der japanische Rundfunk..." (target area) - Italian: "Buon giorno, sign. radioascoltatori Italiani. Qui Radio Giappone - Reparto Servizio Internazionale di NHK..." - Spanish: "Aquí Radio Japon..." - Portuguese: "Estão ouvindo a Rádio Japão..." - Indonesian: "Inilah Radio Jepang, siaran internasional dari NHK di Tokio..."
INT.-SIG.: Home Service: Both on the 1st and the 2nd networks, a musical signal is beamed on a celeste before commencing broadcasting. No interval signal is used since both the 1st and the 2nd networks are continuously on the air. - Foreign Service: Opening music "Sekura":

Interval signal music "Kazoe Uta":

PUB.: NHK Shimbun or NHK Radio & TV News (weekly) - NHK Hoso Bunka or NHK Broadcast Culture (monthly) - Broadcast Engineering (monthly) - NHK Technical Journal (quarterly) - NHK Year Book (annual) - Prgr. schedules are published annually in April, when the schedules are revised. The language used is Japanese - The prgr. sched. Overseas Sec. is published every time the prgr.s are changed. The Foreign Sec. sched. is distributed upon request. No return postage required. - F.P.L.: Four 100 watt m.w. stations are expected to be established by the end of March 1959. Studies are also in progress on measures designed to eliminate areas having difficulty in receiving broadcasts. - V. by QSL-card.

RELAY STATIONS:

For frequencies of the relay stations, refer to the individual countries: Germany, Greece, Dodecanese Islands, Great Britain, Tangier, Ceylon, Hawaii, Ruykyu Islands, and Philippines.

ANNOUNCEMENT:

Each program ends with these words spoken in English: "This program has come to you from the United States of America." The station identification is then announced in English.

INTERVAL SIGNAL:

Choir of brass playing a 10 note version of "Columbia, the Gem of the Ocean." This musical symbol is played at the beginning of a transmission, during station breaks, and at the conclusion of a transmission. At the beginning of a transmission the sign on announcement is followed by 3 minutes of musical symbol made up of alternate 5 seconds music and 5 seconds silence.

VERIFICATION by QSL-card. No return postage required

ARMED FORCES RADIO and TELEVISION SERVICE

ADDR.: Office of Armed Forces Information and Education, Washington 25, D.C.

This office exercises overall policy control of the Armed Forces Radio and Television Service. The mission of AFRTS is to keep U.S. men and women stationed outside the States the best informed service personnel in the world on current events. All broadcasts are in English. News, sports and other timely matter is beamed overseas directly by twelve powerful tr. on the U.S. Atlantic and Pacific coasts. These s.w. broadcasts serve the overseas radio stations, which rel. them locally. Prgrs. other than news and locally produced prgrs. are derived directly from the U.S. Commercial Networks. N. is compiled directly from the wires of A.P., and U.P.I. (United Press International). AFRTS presents regular s.w. prgrs. from both Los Angeles and New York City, using the transmitters of the V.O.A.

EUROPEAN SERVICE (from New York).

ADDR.: Armed Forces Press, Radio and Television Service, 250 West 57th Str., New York 19, N.Y. - L.P.: Capt. H. A. Lincoln, U.S. Navy, Officer in Charge A. F. Press, Radio.

D. PRGR.: 50 kW. - Period: All year.

NATIONAL ASSOCIATION OF EDUCATIONAL BROADCASTERS:

(NAEB.)

The national independent professional association, which since 1925 has represented the interests and needs of educational television and radio broadcasters, represents appr. 75% of the educational stations and production centers of the United States (appr. 90% exc. those identified as theological or religious st.)

ADDR.: Executive Office: 14 Gregory Hall, Urbana, Illinois.

L.P.: Pres.: F. E. Schooley. Vice-Pres.: J. McBride. Exec. Dir.: Dr. Harry J. Skornia. Associate Dir.: H. E. Hill.

Stations: 132 educational institutions and organizations owning and operating a total of 196 educational radio and 32 educational T.V. stations: AM-stations: 39; FM-stations: 157; TV-stations: 32.

Activities and Functions: The NAEB is the Association of American institutions operating educational, cultural and public sec. radio and TV st. and production centers. Its services include workshops, seminars, regional and national annual conferences, personnel-upgrading programs, engineering, legal, research and other operational consultant services, an employment agency, and numerous publications in radio and T.V., incl. a monthly Newsletter. It maintains an active production prgr. and has an exchange-advisory membership relationship with most national educational organizations. The NAEB also operates a radio network which duplicates via tape and distributes to member-stations several hours of programming per week. At present there are some 78 stations in this network.

It also actively cooperates with various international organizations (European Broadcasting Union, Prix Italia, International University of the Air, UNESCO, etc.), and the national systems of various other countries (R.T.F., BBC, RAI and others), exchanging prgrs., publications and personnel with the broadcasting organizations of over 20 nations in Europe, Asia, Australia and Africa, as well as those in No.C. and So. America.

STANDARD FREQUENCIES AND TIME SIGNALS

R. STATION WWV AND WWVH (Go.)

ADDR.: Nat. Bureau of Standards Boulder Laboratories, Boulder, Colorado, USA - WWV: Box 182, Route 2, Lanham, Maryland - WWVH: Box 901, Puunene, Maui, T. H. - L.P.: Dir. Tec.: WWV: Fr. Sera. Dir. Tec. WWVH: S. Katahara.

Standard Radio Frequencies: WWV: 2500 kc/s 120 m 1 kW - 5000 kc/s 60 m 10 kW - 10000 kc/s 30 m 10 kW - 15000 kc/s 20 m 10 kW - 20000 kc/s 15 m 1 kW - 25000 kc/s 12 m 0.1 kW. The Broadcasts are continuous, night and day, exc. WWV is off the air approx. 4 min. each h. The silent period commences at 45 min. plus 0 to 15 seconds, after each h.

WWVH: 5000 kc/s 60 m 2 kW - 10000 kc/s 30 m 2 kW - 15000 kc/s 20 m 2 kW.

WWVH is interrupted 4 minutes after each h. and half h. and 34 minutes beginning at 19.00 each day.

Time signals: The audio frequencies are interrupted precisely two minutes before each h. They are resumed precisely on the hour and each five min. thereafter; they mark accurately the hour and the successive 5-min. periods.

ANN.: "National Bureau of Standards, WWV, when the tone returns Eastern Standard Time is...AM or...PM" - V. by QSL-card or letter. - PUB.: Prgr. sched. on request.

NATIONAL PHYSICAL LABORATORY (Go.)

ADDR.: Teddington, Middlesex, Gt. Britain.

MSF STANDARD FREQUENCY SERVICE:

kc/s	m	kW	kc/s	m	kW
60	5000	10	14.29-15.30	5000	60
5000	120	0.5	- - *	10000	30
				0.5	continuous*

*) exc. for break in transm. from 15-20 minutes past each h.

ANN.: Call sign 3 times in slow Morse. "This is MSF, Rugby England transmitting carrier and modulation frequencies within 2 parts in 108 of nominal on 2500, 5000 and 10000 kc/s". - V by letter.

ROYAL GREENWICH OBSERVATORY

ADDR.: Time Dept., Herstmonceux Castle, Hailsham, Sussex, England.

The international time signals of the Royal Greenwich Observatory are radiated as follows: 10.00 and 18.00 Rugby GPNB30 10332.5, GIC37 17685.0 kc/s. At 18.00 also long wave GBR 16 kc/s and GBZ 19.6 kc/s.

TIME SIGNALS FROM DOMINION OBSERVATORY, CANADA

ADDR.: Dominion Observatory, Dept. of Mines and Technical Surveys, Carling Av., Ottawa, Ontario. - L.P.: Dir. Adm.: Dr. C. S. Beals. Dir. Tec.: M. M. Thomson.

STATIONS: CHU 3330 kc/s 90.09 m 0.3 kW. - 7335 kc/s 40.90 m 3 kW - 14670 kc/s 20.45 m 0.3 kW - D.PRGR.: 24 h. Time Signals only, in voice and seconds pulses. - ANN.: Hours and minutes announced during the last 10 seconds of each minute: "Dominion Observatory, Canada, Eastern Standard Time...hours...minutes" - V. by QSL-card. - F.P.L.: Standardization of frequencies in 1960. - PUB.: Prgr. sched. free on request.

STATION JJJ

ADDR.: R. Research Laboratories, 13-6 chome, Iigura, Azabu, Minato-ku, Tokyo, Japan

Standard Freq. & Time Signals:

2500 kc/s	2 kW	06.59-22.59	10000 kc/s	2 kW	24 h. a day
5000 kc/s	2 kW	24 h. a day	15000 kc/s	2 kW	24 h. a day

The call-sign, time in Japanese Standard Time and the propagation disturbance warning notice are given every 5 minutes

The st. is off the air every 29-39 min. of the hour - V. by QSL-card

HBN, NEUBURG OBSERVATORY (Switzerland)

Standard Frequencies: Observed sched. of HBN is as follows: 2500 kc/s: Sat. 07.10-Tues. 07.00, Wed. 07.10-Fri. 07.00, 5000 kc/s: Tues. 07.10-Wed. 07.00, Fri. 07.10-Sat. 07.00.

Scheme per hour: 00.00-00.05 pause - 00.05-00.10 impulses each sec. - 00.10-00.15 pause - 00.15-00.20 impulses each sec. - 00.20-00.25 pause - 00.25-00.30 440 c/s tone - 00.30-00.35 pause - 00.35-00.40 impulses each sec. - 00.40-00.55 pause - 00.55-00.60 impulses each sec. Before each 5 min.-transm. begins: 3 x HBN.

STATION LOL

ADDR.: Observatorio Naval del Ministerio de Marina Costanera Sud, Buenos Aires. - L.P.: Dir. Gen.: A. Acevedo. Dir. Tec.: A. Ricart.

Standard Freq. and Time Signals: LOL:

5000 kc/s	2 kW	10000 kc/s	2 kW	15000 kc/s	2 kW
-----------	------	------------	------	------------	------

D. on all freq.: 11.00-03.00.

Schedule: 4 min. dash (1200 c/s), beginning at 00.00, 00.05, 00.10 etc. Then 3 x LOL in morse and IGY alert call (4'20", 9'20", 14'20" etc.), followed by ann. (lady's voice) of Argentine time.

Every two months first-hand information on the world of broadcasting is offered to you in the

E. B. U. REVIEW

published by the European Broadcasting Union

Part A - Technical - will keep you up-to-date regarding the long- and medium-wave situation in the European Broadcasting Area and the latest developments in the television and sound broadcasting networks on metric waves, including such questions as

wave propagation and frequency assignments in all of the broadcasting bands,

the installation and operation of transmitting stations and studio centres, of recording systems and outside-broadcast facilities, both for sound and television,

Eurovision, etc.

Part B - General and Legal - will inform you of administrative, programme and legal developments in radio and television throughout the world such as

the activities of international organisations concerned with broadcasting in all non-technical fields,

the progress of radio and television organisations in most countries from the point of view of administration, finance and programmes,

analyses of new Copyright Acts and all legislation and jurisprudence touching upon broadcasting.

ANNUAL SUBSCRIPTION:

Part A (six numbers): price 150 Belgian francs. Publishers: E.B.U. Technical Centre, 4, rue de la Vallée, Brussels (Belgium).

Part B (six numbers): price 15 Swiss francs. Publishers: E.B.U. Administrative Office, 1, rue de Varembe, Geneva (Switzerland)

A combined subscription to Parts A and B (twelve numbers) may be ordered either from Brussels or from Geneva (price 300 Belgian francs or 27 Swiss francs).

WORLD TELEVISION

The principal television systems:

Definition refers to the broadcast standard which is normally stated in terms of the number of lines which make up the image. Reference in the following surveys is made throughout merely to 405 lines, 525 lines, 625 lines (CCIR*), 625 lines (Soviet**) and 819 lines respectively. Details of these five definitions are given in the following table:

	Systems			
Number of lines per picture	405	525	625*	819
Video bandwidth (Mc/s)	3	4	5	10.4
Channel width (Mc/s)	5	6	7	14
Sound carrier relative to vision carrier (Mc/s)	÷ 3.5	+ 4.5	+ 5.5	÷ 11.15
(Sound carrier relative to edge of channel (Mc/s)	0.25	÷ 0.25	÷ 0.25	+ 0.10
Interlace	2/1	2/1	2/1	2/1
Line frequency (c/s)	10,125	15,750	15,625	20,475
Field frequency (c/s)	50	60	50	50
Picture frequency (c/s)	25	30	25	25
Sense of vision modulation	Positive Negative Negative Positive			
Level of black as percentage of peak carrier	30	75	75	25
Sound modulation	AM	FM	FM	AM

* The International Radio Consultative Committee.

** The characteristics are the same as 625 lines CCIR exc. for a difference in bandwidth: video bandwidth 6 Mc/s, channelwidth 8 Mc/s, sound carrier relative to vision carrier + 6.5 Mc/s.

The following pages give you the data of the different TV stations of the world. The channel is indicated by a letter followed by a figure. The letter indicates the technical data of the systems which are in use (A: American, B: British etc.) and the figure is the channel number.

The powers for vision and sound are indicated by a fraction, the numerator indicating the number of kW (ERP) for vision and the denominator for sound, for example 6/1.5 means vision 6 kW ERP and sound 1.5 kW ERP.

STATIONS:
German Prgr.: Bantiger (Berne) ch E2 30/6 kW - Uetliberg (Zürich) ch E3 20/4 kW - Chrischona (Bäle) ch E10 10/2 kW - Säntis (St. Gall) ch E7 30/6 kW.

French Prgr.: La'Dôle ch'E4 100/20 kW.
Italian Prgr.: Monte Ceneri ch E5 10/2 kW - San Salvatore ch E10 10/2 kW.

Gap-filling transmitters (boosters): Tramelan (Jura), Sion (Valais), La Chaux-de-Fonds (Jura), Says (Coire), Martigny (Valais).

D. PRGR.: In German, French daily (exc. Tues.): 19.15 - about 21.00, and special prgrs. in the afternoon, f. inst. Eurovision, sporting events etc. - Wed.: afternoon Children's Hour - Sat. afternoon: Children's Hour, Women's prgrs., Sports News. - Sun. morning: Outside broadcast services from churches.

Until the Tessin obtains its own O. B. van and a small studio at Lugano Broadcasting House (probably 1960), the Italian-speaking transmitters relay, besides joint broadcasts, prgrs. from the German-speaking and French-speaking part of Switzerland, resp. with commentary in Italian.

Type of programmes: The Swiss TV programmes cover all subjects. Relay facilities: A microwave link across the Alps. It runs from Gempen, near Bäle (northern border) to Froburg-Bantiger-Jungfrau (12,200 ft.) - Monte Generoso (southern border) - Lugano. This link connects the northern and southern parts of Switzerland on the one side, and the German and Italian TV systems on the other side. - A second microwave link runs from Uetliberg-Froburg-Bantiger-Romont-La Dôle. It has been extended to Cuiseaux for the programme exchange with France.

★ UNITED STATES OF AMERICA ★

Number of TV-stations: Total authorized 663. Licensed and operating: 555 (incl. 424 licensed and 131 operating CP's (incl. 45 suspended TV-stations). These figures do not incl. 32 operating non-comm. educ. st.

EDUCATIONAL: 32 TV-stations.

ADDR.: Dept. of Health, Education, and Welfare, Office of Education, Washington 25, D.C. - L.P.: Franklin Dunham, Chief of Radio. Approx. 500 commercial TV-stations carry educational prgrs. during free periods. 257 TV-channels have been reserved by F.C.C. for the use of non-comm. educational st. Of 53 authorized educational TV-stations, 32 have operating permits, mainly in the large cities and university centres. They are of three types: 1) Community stations supported by voluntary funds; 2) University stations supported by State and local budgets; 3) State-owned networks covering entire divisions of the country supported entirely by taxation. The States having this type of operation are all located in the Southern areas. - An interesting development for educational purposes is closed-circuit TV, limited to universities and to individual school-systems. A prgr. sec. known as the Educational Television and Radio Center located at Ann Arbor Mich., supplies educational TV prgrs. to the present stations and in addition, distributes its prgrs. to both closed circuit and film projectors which are in use in thousands of schools.

North South, East, West, in whatever direction, in, whichever country news is happening, there is a Visnews cameraman to film it for your screen.

VISNEWS operates under a Trust formed by the B.B.C., The Rank Organisation, The Canadian Broadcasting Corporation and the Australian Broadcasting Commission.

With premises and laboratories connected to nearby London Airport by a continuous shuttle service of Despatch Riders, VISNEWS cuts to the minimum the time between the news event and your seeing it on film.

For the Newsfilm Service your News Programme cannot afford to be without, write for details to:-

All-Transistor TRANS-OCEANIC

STANDARD AND SHORT WAVE PORTABLE RADIO

Smallest and lightest band-spread short wave portable ever produced

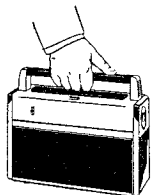

Here is the
ALL TRANSISTOR version
of the world-famed
Zenith Trans-Oceanic®
...the original short wave
portable radio

With hundreds of thousands of owners throughout the world, the original Trans-Oceanic Short Wave Portable has been tried, tested and proved for over 16 years. Companion to diplomats, world-travelers, explorers! Its list of owners reads like an International "Who's Who." Now, as a companion to this world-famed Trans-Oceanic, Zenith announces with pride the fabulous new ALL TRANSISTOR Trans-Oceanic Short Wave Portable Radio.

Engineered, Designed and Built in the United States of America

A complete world-wide "radio receiving station" in a sturdy, metal case finished in bright chrome and genuine Black Leather. 12 $\frac{1}{2}$ " wide, 10 $\frac{1}{4}$ " high, 4 $\frac{1}{4}$ " deep. Approx. Wt. 13 lbs.

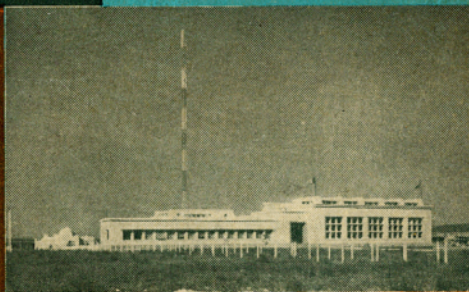

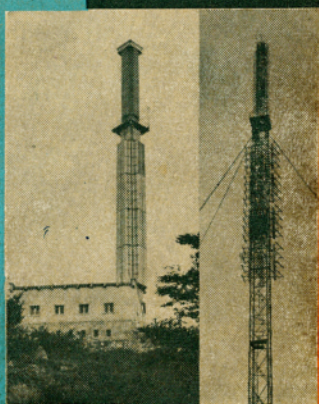

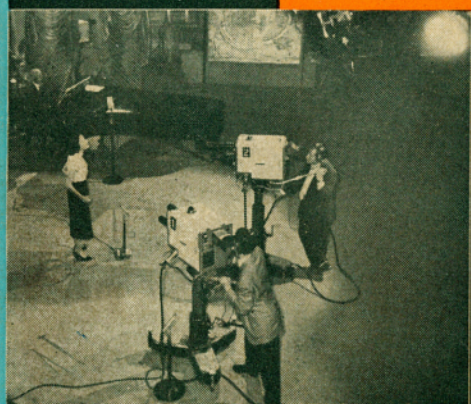

- **POWERED WITH 9 TRANSISTORS TO TUNE IN THE WORLD** ... Actually 92% more undistorted power output than any other tube type short wave portable! Performs in steel buildings, planes, automobiles, ship-to-ship and ship-to-shore.
- **BEAUTIFUL, REGAL, RUGGED** ... engineered as soundly as a shock-proof watch. Tropically treated to perform even in high jungle humidity.
- **3 BUILT-IN ANTENNAS** ... the handle itself telescopes to a vertical Waverod® Antenna for short wave reception. Wavemagnet® Antenna for local broadcasts. Another Wavemagnet Antenna is removable to attach to window in planes, trains, automobiles.
- **8 SUPER SENSITIVE BANDS** ... including International Short Wave, Standard Broadcast, Marine, Weather, Amateur Short Wave.
- **ROTARY BAND SELECTOR** ... spread-band, slide-rule dial. One knob tunes all 8 bands. Dialite for operation under poor lighting conditions.
- **NEW LOG CHART COMPARTMENT IN FRONT PANEL** ... lists major short wave stations in the world, with their frequencies and hours of best reception.
- **OPERATES ON LOW COST FLASH-LIGHT BATTERIES** ... available anywhere. Low cost transistor operation eliminates need for tubes, AC/DC power outlet and bulky "B" batteries.
